

Hello,

Attached is the source code of POC Shopping App. It is specially designed to show a list page which contains a list with products categorized. Each item in the list is displayed in full name and thumbnail of the image. Moreover, clicking an item will display the details of the product which include name, source image with bigger view and price of the product.

Developer followed MVP approach to develop the application using library such as RxAndroid, Butter Knife, Retrofit and Glide. To test the application he used library such as Robolectric, Espresso, AndroidJUnitRunner and Junit.

**Application Manual** :User will see Figure 1, Once he installs the application.

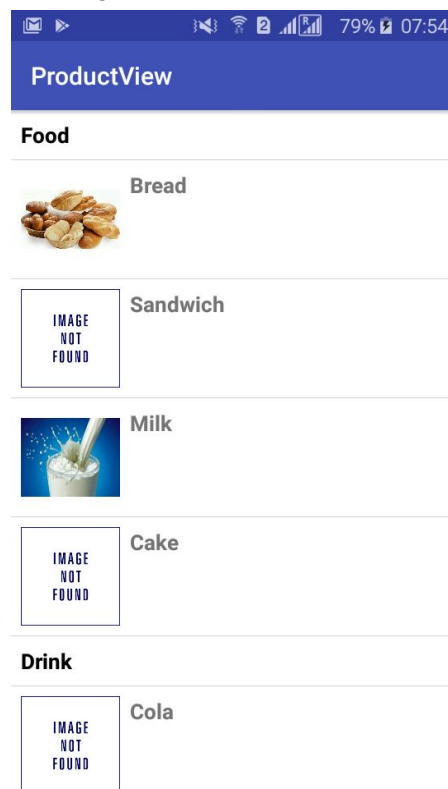

Figure 1 List of product

After clicking on the Item of the listview , he will see description of the item as can be seen in Figure 2.

Figure 2 . Item Description.

Thanks for your time and hope I get the chance to discuss further.
